Leave a better world for future generations

## **PRODUCT DESCRIPTION**

---

WILEFKO, is a waves engine able to transform thousands of waves impacts in a continuous motion for pumping salt water, compressed air supply and /or generate electricity.

## TECHNOLOGICAL OPPORTUNITY

---

**Breaking waves:** Exploits a more concentrated energy, with better performance per ton installation.

**Air Energy Storage:** allows delivering electricity in electricity consumption peaks.

**High scalability of facilities:** From individual devices to farms of 30KW to 11MW per kilometer.

**Method of multi-linear blade:** Which increases two to three times the energy collected.

**Environmental Responsibility:** Does not pollute, does not produce toxic waste.

## MARKET OPPORTUNITY

---

Wilefko marketing solution starts in April 2015.

38 countries in the world can use this system with maximum efficiency by having the wave conditions necessary to operate.

The first Wilefko potential customers are large mining companies in northern Chile and government institutions.

The solution can be offered in three "versions" to cover both the needs of isolated communities such as industrial infrastructure that require power up to 20 MW.

We have patent protection in the US, European Union, Canada, Australia and Chile, with a potential industrial protection in a market of 16 countries.
